

Alteris BMS v. 7.5

List of Fixes, Enhancements, and New Features through Build No. 7.50.14

Fixes

You can now set the number of statement copies to print when using the Windows form.

“Fuzzy” search in alternate shipping now works correctly.

Problems editing certain fields in edit data files have been corrected.

Problem recalling closed work orders has been fixed.

Lock up when editing a price after editing a tech comment on a work order has been fixed.

Problem of end of day check and credit card printout skipping a line when printing on multiple pages has been fixed.

Serial numbers are now released correctly when voiding an invoice.

Problem of item being placed on an invoice after canceling the search grid has been fixed.

Problem of inventory screen going blank after using [F2] to view vendor information has been fixed.

Problem with sporadically not receiving all items has been fixed.

When not using quick scan, you now return to the quantity field after selecting an item from the fuzzy search.

Program Changes

Time clock function integrated. (Requires separate purchase of Alteris Tools license. Call for details.)

Credit card information is now encrypted when stored. (All old numbers will be converted on upgrade.)

Main screens can no longer be minimized in order to accommodate an incompatibility with Windows XP Service Pack 2.

All invoice reprints (tape and full size) use [F2]. Reprints may now be disabled or require the manager password to print.

Enhancements

Ability to see quantity on hand and PO total when editing line items on a PO has been added.

Ability to export e-mail addresses has been added. (Option from Customer Mailing Labels.)
