

Alteris BMS version 7.5 Update Procedures

From our web site (www.ezpos.com), select Updates, Alteris BMS 7.5, then download the update file.

You will be prompted to save the file. Save it to '{datadrive}:\alteris\alt75\files' where {datadrive} is the drive letter your Alteris data is on (depending on your drive mapping, the folder may be '{datadrive}:\alt75\files'). Alternatively, you may save it to a temporary folder and then copy it to the appropriate folder.

If you are running a build number earlier than '7.50.00 E' (you can easily find the build number, from the main menu select Help, About. There will be 3 build numbers X - for Executable, D - for Data, and L - for Local. The numbers should all be the same), also download the following file:

<http://ftp.ezpos.com/updexe75.exe>

Then copy that 'updexe75.exe' file into the 'c:\alteris\alt75\config' folder on EVERY computer.

FIRST COMPUTER

From Main Menu of Alteris, select Files, Update (on some versions it may simply be 'Live Update'). From the Update Program Files screen, select the second option, 'Install Updated Program Files'. Click OK.

When prompted where to expand the files to, accept the default of your alteris\alt75\files directory. Either uncheck the 'confirm overwrite' box or accept the overwrite on each file when prompted.

Afterwards, you should see a message saying 'Please wait... Copying files'. Then the Data Files Upgrade window will open. Press [enter] to start the upgrade process.

When complete, you will be notified that the upgrade is complete.

OTHER COMPUTERS

Start Alteris and from Main Menu, select Files, Update (or Live Update). From the Update Program Files screen, select the third option, 'Update Subsequent Workstations'. Click OK.

You should see a message saying 'Please wait... Copying files'. Then the Data Files Upgrade window will open and upgrade your local files. When complete, you will be notified that the upgrade is complete.
